

Water and Climate

Common coordinates for a dialogue between Europe and Africa

Torino, Palazzo Cisterna, 21-22 November 2019

In recent years, international cooperation has invested increasing resources on the issue of local governance with the aim of promoting and strengthening the capacities of local authority. In particular, the local governance of water services has been consolidated as a catalyst for local development to generate and implement policies and services that are better suited to the needs of different contexts. Good governance of water services generates long-term impacts on the economic, social and political processes which establishes, even at the global level, relationships between territories and communities.

Through the dialogue between European and African experts, the international round table on **“WATER AND CLIMATE - Common coordinates for a dialogue between Europe and Africa”** intends to conduct participants in the analysis and comparisons of the different models of governance of water services, local good practices as well as challenges that are, nowadays, crucial issues for sustainable development.
